

Bold Discounts Bold Integrations

Discounts Powered by Bold Price Rules integrates with some of our other apps that are available on Shopify. These integrations either allow customers to receive the best discount if both of the apps use the connection API, while some of the other integrations may allow both apps to simply exist on the same store without any interference between each other.

Discounts & Bold Bundles

Note: [Bold Bundles](#) must be enabled in Accelerated Method - Version 3 in order to work with Discounts. Since Discounts uses a connection API to apply discounts, Bundles must be set to Accelerated Method in order for both apps to apply discounts correctly on the storefront. Visit [Discount Methods and How-to Switch](#) for more information on these methods and how to switch.

Discounts and Bold Bundles while set to Accelerated Method both use the connection API to apply discounts to products on your storefront and in result, does not require an additional setting to enable both apps together.

When a product is being discounted across both apps, the highest/best discount is applied to the product on the storefront. For example:

Example

- Product A and Product B are \$50.
 - Product A is discounted in Bold Discounts and Bundles.
 - Bold Discounts offers a 50% discount for both products.
 - Bundles offers a \$15-off sale for both products when purchased together.
 - Product A and Product B would have the rule in Bold Discounts applied, as your customers would receive these items for \$25 each instead of \$35 each.
-

Discounts & Bold Cashier

Note: Bold Cashier is no longer available for installation on Shopify. If your store has Bold Cashier installed prior to January 20th, 2020, you can continue using this integration.

Bold Cashier is integrated with Discounts to provide more flexibility of offering dynamic sales to your customers, while also allowing you to use 3rd-party checkout buttons and discount codes in the checkout page.

To enable this integration, please follow these steps:

1. From the homepage of Cashier, click **Marketplace**.
2. Click **Install** on the **Bold Pricing** option.
3. Click **Allow**.

Discounts & Bold Custom Pricing

Note: [Bold Custom Pricing](#) must be enabled in the Accelerated Method - Version 3 for this integration. Discounts is not able to discount the same products being discounted in Custom Pricing unless Custom Pricing is using this method. Visit [Discount Methods and How to Switch](#) for more information on this method and how to switch.

Custom Pricing's Accelerated Method and Discounts both use the connection API to apply discounts to products on your storefront and in result, does not require an additional setting to enable both apps together.

When a product is being discounted across both apps, the highest/best discount is applied to the product on the storefront. For example:

Example

- Product A is \$20.

- Product A is discounted in Custom Pricing and in Bold Discounts.
 - Custom Pricing offers a 50% discount.
 - Bold Discounts offers a \$15-off sale.
 - Product A would have the rule in Bold Discounts applied, as your customers would receive this item for \$5 instead of \$10.
-

Discounts & Bold Multi-Currency

Note: Bold Multi-Currency is no longer available for install. If you already have this app on your store, you can continue using it.

Discounts does not have an official integration with Bold Multi-Currency at this time. Both apps work independently from each other and can be used without any interference between each other.

When an active discount is applied onto a product, the discount that is applied from Discounts is converted to the currency that is selected by the customer in the Multi-Currency widget.

Discounts & Bold Upsell

Discounts does not have an official integration with [Bold Upsell](#). Both apps work independently from each other and can be used without any interference between each other.

Note: Discounts does not have the ability to create duplicate and hide products and as a result, BOGO (Buy One Get One) type deals cannot be achieved between Discounts and Upsell. Please visit [Create/Edit/Delete a Bundle](#) for more information on creating a BOGO type offer on your store using [Bold Bundles](#).
